

For Immediate release

PEEK Traffic Announces the ADR SABRE Portable High Performance Vehicle Counter / Classifier

Palmetto, Florida - May 1, 2012 - Peek Traffic is excited to announce availability of **the ADR SABRE....**the new standard for high performance, portable vehicle counter/classifiers. Using advanced technology, SABRE provides unmatched versatility and accuracy for a wide range of highly effective vehicular traffic studies.

Examples of SABRE's features include: Very high speed electronics for outstanding vehicle classification accuracy and high precision data such as vehicle speed in increments of 0.01 mph. A display screen with 4x more capacity combined with a new interface menu enables quick, easy setup and data monitoring. 16 MB of permanent memory plus up to 4GB of optional memory support multiple simultaneous binned studies and extensive time stamped event recording. Very low energy consumption allows field use for months before recharge, dramatically reducing labor and battery costs. USB interfaces allow simple, high speed transfer of both, study files for setup and data for post processing.

An additional benefit to owners of the PEEK ADR 1000 is the potential to upgrade their units to SABRE with very attractive cost savings compared to buying new units.

SABRE is the successor to the PEEK ADR1000 Plus, part of the industry's most popular vehicle counter/classifier product family. As such, SABRE is based on the robust, reliable engineering and ISO manufacturing practices that enabled PEEK ADR products to become the industry standard.

PEEK is currently shipping the base SABRE with 4 road tube inputs. Firmware and optional cabling will soon enable the same unit to support contact closure input. Also available soon will be options to support high performance processing for loop sensors, WIM, etc.

Please contact Glenn.Harter@PEEKTraffic.com or (941) 845-1271 for additional information. To find your local SABRE distributor, please visit www.PEEKTraffic.com/distributors.

With equipment and systems installed globally, PEEK Traffic is the most trusted and widely recognized manufacturer of hardware and software for: traffic control; traffic data collection and analysis; vehicular tolling; and vehicle detection.
